

2025-2026 UNDERGRADUATE CATALOG | COURSES OF STUDY

Pre-professional Studies

Division of Science and Mathematics

Minor: 42 credit hours

Minor GPA required for graduation: 2.5

Description of Minor: Students will take a variety of courses in biology, chemistry, physics, and mathematics. The curriculum is designed to cover content areas that are not only required for admission to post-baccalaureate programs, but also are known to be included in a variety of standardized exams such as the GRE, MCAT, DAT, and VCAT.

Note: Students not planning on majoring in biology or chemistry, but still wishing to apply to a professional program after graduation, should consult Dr. Robb Van Putte or Dr. Vincent Dunlap.

Specific requirements of the desired graduate or professional program should be considered when selecting courses.

Student Learning Outcomes

Students will:

- Develop and execute a well-rounded plan that prepares them for graduate study.
- Develop the skills needed for career development in the sciences.
- Demonstrate successful problem-solving through the use of scientific reasoning, critical thinking, analysis, and synthesis of information.

Preparation: The pre-professional minor serves students who wish to pursue a post-baccalaureate degree in areas such as medicine, optometry, dentistry, pharmacy, physical therapy, physician's assistant, podiatry, chiropractic, and veterinary medicine.

MINOR REQUIREMENTS		42 crs.
BIO 110	PRINCIPLES OF CELLULAR	
	AND MOLECULAR BIOLOGY	5
BIO 111	PRINCIPLES OF ORGANISMAL	
	AND POPULATION BIOLOGY	5
CHE 105	GENERAL CHEMISTRY I	4
CHE 106	GENERAL CHEMISTRY II	4
CHE 205	ORGANIC CHEMISTRY I	4
CHE 206	ORGANIC CHEMISTRY II	4
CHE 303	PRINCIPLES OF BIOCHEMISTRY	4
MTH 210	CALCULUS I	4
PHY 211	GENERAL PHYSICS:	
	MECHANIC, HEAT, SOUND	4
PHY 212	GENERAL PHYSICS: ELECTRICITY,	
	MAGNETISM, OPTICS	4

2025-2026 UNDERGRADUATE CATALOG | COURSE DESCRIPTIONS

Biology (BIO)

BIO 101 BIOLOGY FOR LIFE

This course is intended for the non-science major. The principal objectives are to prepare students to be scientifically literate citizens and to connect biological principles to realworld problems. This includes the effect of biotechnology on society as well as environmental issues such as climate change and habitat destruction. This course meets for three hours of lecture per week and one three-hour laboratory per week. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 108

BIOLOGY CORNERSTONE

This course serves as an introduction to the biology program and the field of biology. The class will focus on strategies for success both in the program and after graduation, highlighting the various subfields of biology, career opportunities, graduate and professional school preparation, skills for critical reading of the primary literature, and communicating scientifically.

BIO 110 PRINCIPLES OF CELLULAR AND MOLECULAR BIOLOGY

This course is an introductory biology course for biology majors that emphasizes basic principles of cellular and molecular biology including the biochemical basis of life, cellular structure and function, metabolism, and genetics. The course meets for three hours of lecture per week and one three-hour laboratory per week. Prerequisite: One year of high school biology or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 111 PRINCIPLES OF ORGANISMAL AND POPULATION BIOLOGY

This course is an introductory biology course for biology majors which emphasizes basic principles of organismal and population biology including animal and plant structure and function, evolutionary principles and mechanisms, the diversity of life, and ecology. This course meets for three hours of lecture per week and one three-hour laboratory period per week. Prerequisite: 1 year of high school biology or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 202 SCIENTIFIC COMMUNICATION (W)

Scientists are responsible for not only generating data, but for communicating data both to other scientists and the general population. As the communication process within the sciences is in many ways different from that found in other subject areas, this course will provide students with the background needed to master those skills. Major areas of skill development include the composition of formal manuscripts and review articles, the development of figures and tables that summarize and effectively communicate findings, and the spoken presentation of original data sets to an audience. Prerequisite: Biology, biopsychology, or environmental studies major.

3

BIO 211 GENETICS

Genetics is the study of DNA, the information-bearing material of inheritance, as well as related molecules and processes. This course will examine how DNA is organized, how its information is transmitted from one generation to the next, and how the information it bears is utilized. The study of genetics is foundational to many other biological fields, and this course will provide students with the background they need to go on in such diverse topics as development, physiology, and evolution. This course meets for three hours of lecture per week and one three-hour laboratory period per week. Prerequisites: BIO 110 and C- or better in BIO 110, or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 220 EVOLUTION

This course introduces the major principles of evolutionary biology. Specific topics include a brief history of evolutionary thought, concepts of evolutionary genetics, adaptation and natural selection, origins of biological diversity, and paleobiology and macroevolution. This course meets for three hours of lecture per week. Prerequisites: BIO 110, 111, 211, or instructor consent.

BIO 250

INTRODUCTION TO ENVIRONMENTAL SCIENCE

This course introduces the interrelationships among the natural environment, humans, and the human environment. The focus is on building a scientific framework to understand current environmental challenges while incorporating an understanding of interdisciplinary perspectives when considering potential solutions. Students will examine issues such as air and water pollution, global climate change, energy, agriculture, and biodiversity loss.

BIO 280-289 SPECIAL TOPICS IN BIOLOGY

BIO 299

PRACTICUM IN BIOLOGY

For students at the sophomore level or above who wish to arrange a practicum in the laboratory or other appropriate direct-experience learning situation in biology. Prerequisites: 15 hours of related coursework, grade point average consistent with biology program graduation requirements, and instructor consent. No more than eight credit hours combined total for this practicum and an internship may be counted as credit toward the major.

BIO 300 BIOSTATISTICS

Students will cover the use of statistical analysis methods to address biological problems. Emphasis is placed on hypothesis development, statistical testing and interpretation of statistical outputs in R, communication of results in proper scientific format, and the production of figures to graphically display data. Prerequisites: BIO 110 or 111, or instructor consent.

TICS cover the use of statistical analysis methods to

2025-2026 UNDERGRADUATE CATALOG | COURSE DESCRIPTIONS

Biology (BIO)

BIO 303 ECOLOGY

Ecology is a quantitative science that focuses on the diverse interactions between organisms and their biotic and abiotic environment. This course examines factors that control energy and nutrient cycling in ecosystems, population dynamics of organisms, and the structure and function of biological communities, as well as principles that govern ecological responses to anthropogenic changes such as global climate change and habitat fragmentation. The class meets for three hours of lecture per week and one three-hour laboratory period per week. This course satisfies the ecology/evolution elective area for students pursuing a Bachelor of Arts in Biology. Prerequisites: BIO 111, 300, and C- or better in BIO 111, or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 308

HUMAN ANATOMY AND PHYSIOLOGY I

This course provides an in-depth study of the muscular, skeletal, nervous, endocrine, and reproductive systems. For each organ system, anatomy, physiology, and role within the whole organism are discussed concurrently. Gross anatomy is explored in lab utilizing dissections and/or models; characteristics of tissues and cells is investigated with microscopy. Function of each organ system is investigated in lab by physiological observation and experimentation. This course satisfies the cellular/molecular elective area. This course meets for three hours of lecture per week and two two-hour laboratory periods per week. Prerequisite: BIO 101 or 110. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 309

HUMAN ANATOMY AND PHYSIOLOGY II

This course provides an in-depth study of the cardiovascular, respiratory, immune, digestive, and urinary systems. For each organ system, anatomy, physiology, and role within the whole organism are discussed concurrently. Gross anatomy is explored in lab utilizing dissections and/or models; characteristics of tissues and cells is investigated with microscopy. Function of each organ system is explored in lab by physiological observation and experimentation. This course satisfies the cellular/molecular elective area. This course meets for three hours of lecture per week and two two-hour laboratory periods per week. Prerequisite: BIO 101 or 110. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 311 MICROBIOLOGY

This course deals with the morphology, genetics, physiology, and ecology of bacteria and other microbes. In the laboratory, microbiological techniques and applications are stressed. This course meets for three hours of lecture per week and two two-hour laboratory periods per week. This course satisfies the cellular/molecular elective area. Prerequisites: BIO 110, CHE 105, 106, or instructor consent. A student must pass the laboratory portion of any science course to pass the

BIO 313 CELLULAR BIOLOGY

entire course.

This course is an introduction to the biology of all cells with an emphasis placed on eukaryotic cells. Organelles will be studied with attention to their composition, organization, and function. Additional topics to be covered are protein structure/ function, bioenergetics, protein sorting, cell communication, and regulation of the cell cycle. The laboratory will emphasize various methods used by cell biologists as powerful tools for examining cell function. This course meets for three hours of lecture per week and one three-hour laboratory per week. This course satisfies the cell/molecular elective area for students pursuing a Bachelor of Arts in Biology. Prerequisites: BIO 110, CHE 105, 106, and junior standing, or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 320

4

5

5

5

4

CONSERVATION BIOLOGY

This course examines issues related to understanding and preventing the decline of populations and extinction of species. Lectures will discuss fundamental principles of biodiversity maintenance at the level of species, population, and ecosystems. Students will develop knowledge of both ecological and evolutionary principles related to the topic. This course satisfies the ecology/evolution elective area. Prerequisite: BIO 111.

BIO 325 FIELD BOTANY

This is a field-oriented course that surveys local vascular flora and habitats. Field exploration focuses on identification and techniques, with emphasis given to the taxonomy, ecology, evolution, and systematics of native and naturalized plants. This course meets for two three-hour periods per week that will be divided between lecture and laboratory work. This course satisfies the ecology/evolution elective area. Prerequisite: BIO 111 or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 335

FISH BIOLOGY AND CONSERVATION

This course will provide a broad overview of numerous aspects of fish biology, including anatomy, physiology, taxonomy, evolution, and ecology. In addition, the course will also examine management strategies for preserving aquatic ecosystems, with an emphasis on the conservation and management of fish populations targeted by recreational and/or commercial fishing. The laboratory portion of the course will be partially field-based, providing students with the opportunity to sample fishes using techniques employed by natural resources managers. The course will also provide background in the process of identifying local fish species, for the purpose of population assessment and environmental monitoring. This course satisfies the ecology/evolution elective requirement. Prerequisites: BIO 111, 202.

BIO 340

DEVELOPMENTAL BIOLOGY

This course focuses on the fundamental events of embryonic development, with an emphasis on genetic and molecular approaches used in modern experimental embryology. As modern developmental biology employs information and techniques from many different fields of biology, this course provides the challenge of learning and integrating diverse topics in biology including cell biology, genetics, molecular biology, biochemistry, and evolution. We explore the common features of development that are shared by different kinds of organisms and emphasize how diverse organisms use the same signaling and regulatory molecules during embryogenesis. This course meets for three hours of lecture per week. This course satisfies either the ecology/evolution or cell/molecular elective area. Prerequisites: BIO 110, 211, CHE 105, 106, or instructor consent.

4

2025-2026 UNDERGRADUATE CATALOG | COURSE DESCRIPTIONS

Biology (BIO)

BIO 342 NEUROBIOLOGY

This course focuses on various topics in neurobiology, with an emphasis on genetic and molecular approaches used in modern experimental biology. We explore the organization of neurons and glial cells, as well as their development and change over time. We discuss membrane potential at the cellular level and learn about techniques to record electrical potentials. Finally, we examine topics in sensation and perception, as well as motor responses and the related circuitry. This course focuses on reading and interpreting primary literature, as well as presentation of figures and designing next-step experiments. This course meets for three hours of lecture each week. This course satisfies the cellular/molecular elective area. Prerequisites: BIO 110 or instructor consent.

BIO 350 ANIMAL BEHAVIOR

This course will examine the evolutionary (ultimate) and mechanistic (proximate) underpinnings of animal behavior in a number of contexts including foraging, fighting, learning, mating, parental care, and social behavior. Throughout this course, students will also examine principles and methods of scientific investigation and communication. This course meets for three hours of lecture per week. This course satisfies the ecology/evolution elective area. Prerequisite: BIO 111.

BIO 380-389 SPECIAL TOPICS IN BIOLOGY

BIO 410 ANIMAL PHYSIOLOGY

This course provides an introduction to the structure and

function of physiological systems in animals. The primary emphasis is on vertebrates, with comparisons drawn from the entire animal kingdom. Topics include a general introduction to principles of physiology, an overview of physiological processes, and the integration of physiological systems. This course meets for three hours of lecture and one three-hour laboratory session per week. This course satisfies the cell/ molecular elective area. Prerequisites: BIO 110, CHE 105, 106, or instructor consent. Recommended: CHE 205. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 420

COMPARATIVE VERTEBRATE ANATOMY

This course examines the anatomical and physiological adaptations of vertebrates from an evolutionary perspective using lectures and laboratory exercises. Vertebrate diversity is studied by examining all major living clades. An organ systems approach is used to illustrate general structural and functional patterns across different vertebrates. The laboratory portion of the course requires the dissection of several representative vertebrates. This course meets for three hours of lecture and for two two-hour laboratory sessions per week. This course satisfies the ecology/evolution elective area. Prerequisites: BIO 110, 111, 220, or instructor consent. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 430 BIOTECHNOLOGY

3

3

1-3

4

5

Modern genetic techniques have revolutionized the biological sciences, and an understanding of genetics is essential to the fields of biotechnology. This course builds upon students' basic understanding of genetics to develop new molecular genetic skills, a better understanding of experimental approaches, and the ability to access and organize genetic information from the burgeoning bioinformatics databases. The class meets in the laboratory for two two-hour periods per week. In addition, students may be required to work in the laboratory outside of scheduled class time, depending on the nature of the experiments conducted. This course satisfies the cell/ molecular elective area. Prerequisites: BIO 210, CHE 105, 106. Recommended: CHE 205. A student must pass the laboratory portion of any science course to pass the entire course.

BIO 451

SEMINAR IN BIOLOGY

This course allows students to explore a variety of topics and discuss their understanding and interpretation of biological subjects with their peers. The goal of this course is to allow students to pursue specific topics in more detail and to develop the skills necessary to critically evaluate and discuss literature in biology. The course may be taken up to two times for credit towards the major requirements. This course meets for one two hour discussion period per week. Prerequisite: Junior standing and biology major.

BIO 455

BIOLOGY RESEARCH METHODS (W)

2

3-8

1-4

2

4

This is the capstone course in biology. It will provide an overview of topics important to biological research and allow students to apply information they have learned throughout the biology curriculum in a research setting. This course focuses on critical analysis of primary literature and data, as well as scientific communication in the form of both writing and presentations. Prerequisites: Biology major and senior standing, or instructor consent.

BIO 470

INTERNSHIP IN BIOLOGY

No more than four hours of internship may be counted toward a major in biology.

BIO 480 INDEPENDENT STUDY

1 **BIO 492 BIOPSYCHOLOGY CAPSTONE**

This course is the capstone experience for biopsychology

majors. The goals are to provide students the opportunity to learn about biopsychology topics and engage with current research in the field. An emphasis will be placed on field trips and guest speakers to allow for greater lifelong learning. Same as PSY 492. Prerequisite: PSY 275.
