# **MODEL UNITED NATIONS**

**Submitted to: Science and Technology**  
**Topic: International Technological Development**  
**Submitted by: Philippines**

1 EMPHASIZING the fact that, in order for the world's economy to experience even a slight sense of  
2 uniformity, technological advancements must be made in every corner of the globe, including those  
3 who are currently unable to match the high financial capabilities of more developed nations, and  
4

5 STRESSING the fact that, in order for the above mentioned underdeveloped countries to gain the tools  
6 necessary for technological advancement, an effort must be put forth by more developed countries  
7 involved in the United Nations to aid these countries financially, and  
8

9 FULLY ACKNOWLEDGING the effort which has already been put forth by more developed nations  
10 in the form of substantial economic aid, and  
11

12 NOTING WITH DEEP CONCERN, however, the fact that a substantial lack of cooperation between  
13 developed and underdeveloped nations exists in the area of sharing information concerning the  
14 development of technological resources despite the promises made by developed nations to improve  
15 the communication of this information, and  
16

17 EMPHASIZING FURTHER that the economical development of these countries via technological  
18 improvements will improve not only the lives of countless individuals, but also the current stability of  
19 the world's economy;  
20

21 1) SRESSES the importance of sharing information concerning the development of  
22 technological resources in an organized manner with other more underdeveloped nations so as  
23 to benefit the world as a whole;  
24

25 2) PROMOTES the improvement of policy environments for the development of these  
26 resources for economically unsound countries by identifying potential risks and benefits of  
27 new and emerging technologies;  
28

29 3) IMPLORES the cooperation of more developed countries in the United Nations to aide  
30 these countries in identifying new technologies and tailoring the applications of these  
31 technologies to the needs of individual countries;  
32

33 4) ENCOURAGES STRONGLY cooperation between underdeveloped and developed nations  
34 in the area of sharing information concerning technological developments and research for the  
35 ultimate goal of improving the global economy;  
36

37 5) SUGGESTS that the United Nations sanction an annual International Summit which would  
38 focus solely on communication of technological advancement information between  
39 underdeveloped and developed nations, so that the apparent lack of communication between  
40 these nations can be remedied.
